

IX. Appendix A – Installation Instructions

1. Verify the *Informix* Driver is Installed:

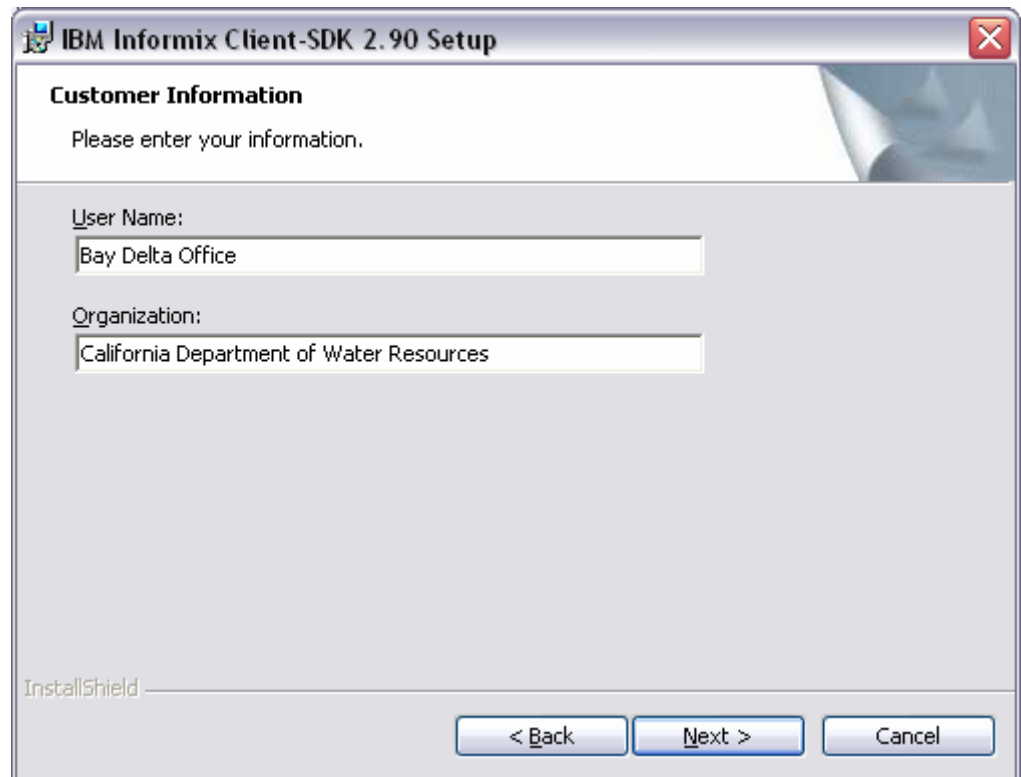

a. In *Windows*:

- 1) Navigate to the *Control Panel*.
- 2) Double-click on *Administrative Tools*.
- 3) Double-click on *Data Sources (ODBC)*.
- 4) Select the *Drivers* tab.
- 5) Check to see if the *IBM INFORMIX ODBC DRIVER* (version 2.9 or higher) is on the list.

- 6) If your computer has this or a later version of the driver, the older version does not have to be installed. Skip to the next section.
- 7) If your computer has no *Informix* driver:
 - i) Open the `ldsm2_training\install` directory:
 - (a) Create a new directory called *Informix Setup*.

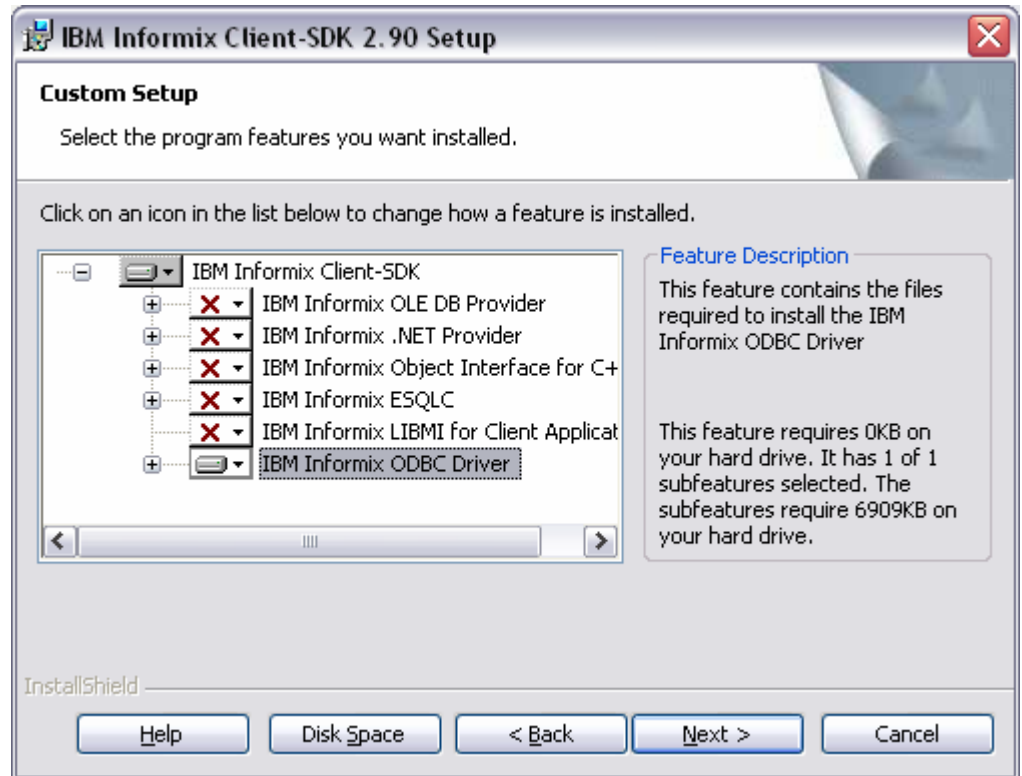

- (b) Double-click on *clientsdk.2.90.TC1.zip*, and extract the files to the new *Informix Setup* directory.
- (c) Open the *Informix* directory and double-click *setup.exe*.
 - (i) Click *Next >*.
 - (ii) Accept the license agreement and click *Next >*.
 - (iii) Enter any U*ser Name* and O*rganization* and click *Next >*.

The screenshot shows a Windows-style installation window titled "IBM Informix Client-SDK 2.90 Setup". The window has a standard title bar with a close button (X) in the top right corner. The main content area is titled "Customer Information" and contains the instruction "Please enter your information." Below this, there are two text input fields. The first field is labeled "User Name:" and contains the text "Bay Delta Office". The second field is labeled "Organization:" and contains the text "California Department of Water Resources". At the bottom of the window, there is a status bar that says "InstallShield" on the left and three buttons on the right: "< Back", "Next >", and "Cancel".

- (iv) Select a *Custom* setup and click *Next >*.
- (v) Accept the default directory and click *Next >*.

- (vi) Deselect everything but the *IBM Informix ODBC Driver* by left-clicking and selecting the red **x**. Then click *Next >*.

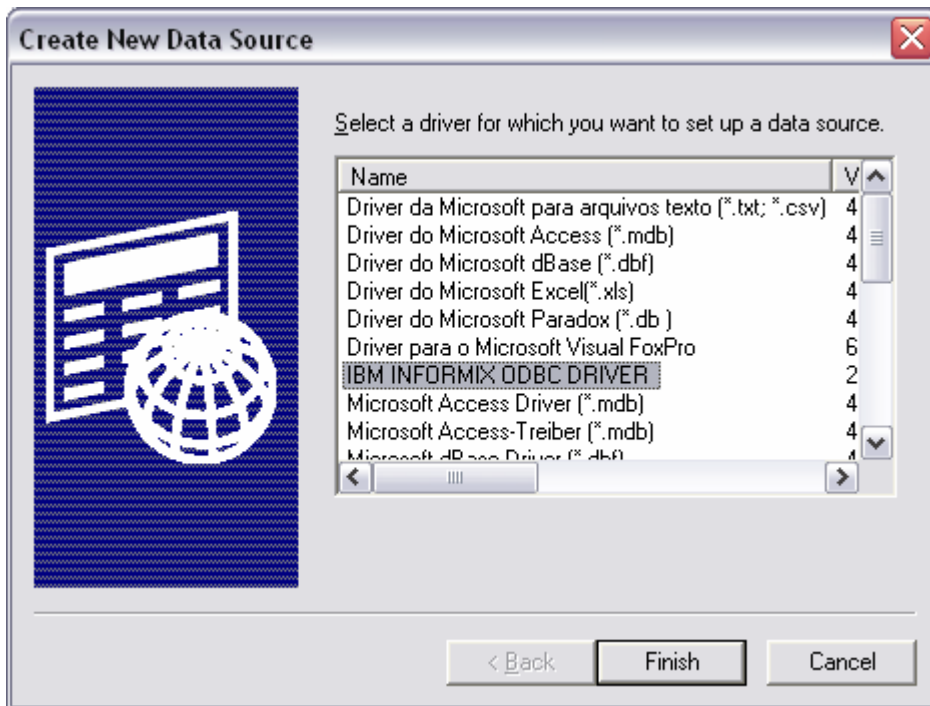

- (vii) Click *Install*.
- (viii) Click *Finish*.

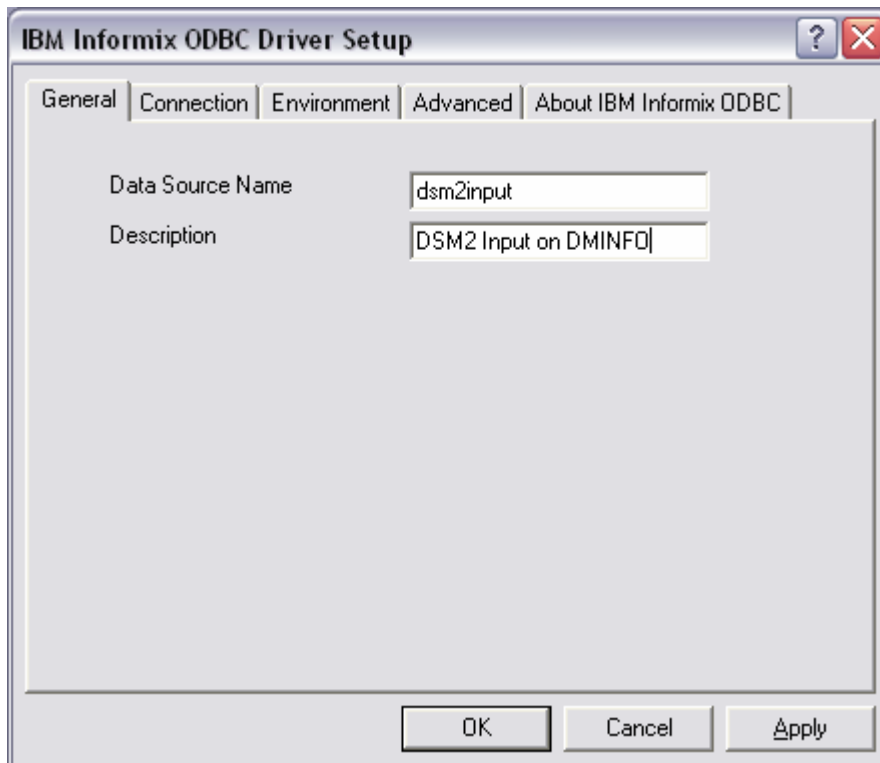

2. Establish an ODBC data source for the *Informix* Database.

- If you do not have an *Informix* account, you must first obtain one from the Computer Assistance section of the Bay-Delta Office. Email Mike Mullen at mmullen@water.ca.gov, and he will send you a password.
- Navigate to the *Control Panel*.
- Double-click on *Administrative Tools*.
- Double-click on *Data Sources (ODBC)*.
- Select the *System DSN* tab and click *Add...*

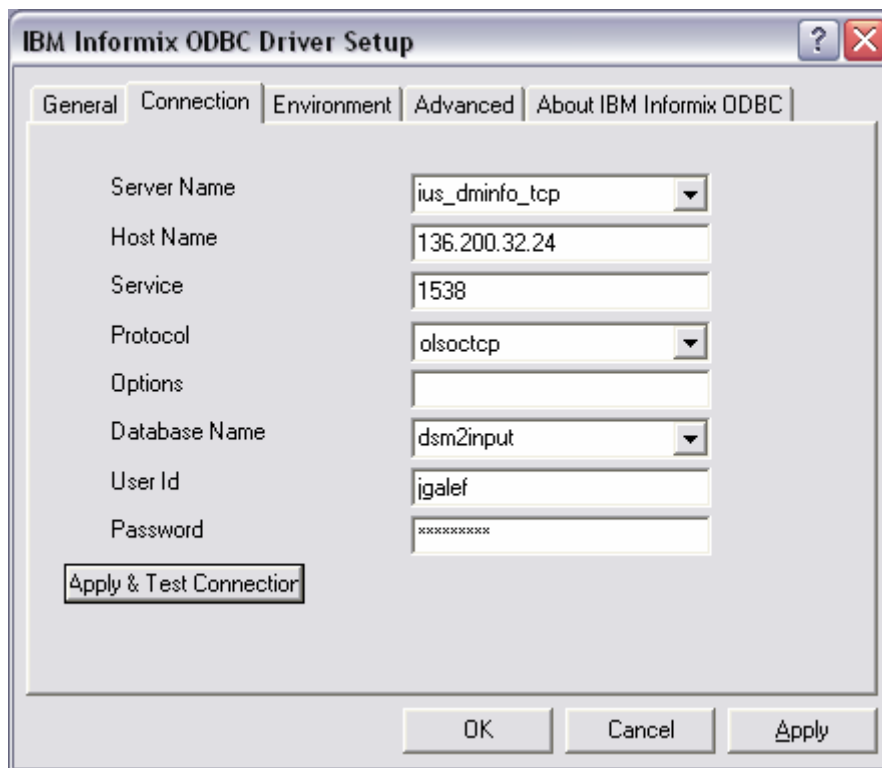

- f. Select the *IBM INFORMIX ODBC DRIVER* and click *Finish*.

- g. Under the *General* tab, enter *dsm2input* for the *Data Source Name*, and provide a description.

- h. Under the *Connection* tab, enter the following information:
- 1) Server Name: *ius_dminfo_tcp*
 - 2) Host Name: *136.200.32.24*
 - 3) Service: *1538*
 - 4) Protocol: *olsoctcp*
 - 5) Database Name: *dsm2input*
 - 6) User Id: use **your** username
 - 7) Password: enter the password provided by Computer Assistance (Mike Mullen or Tim Tran).

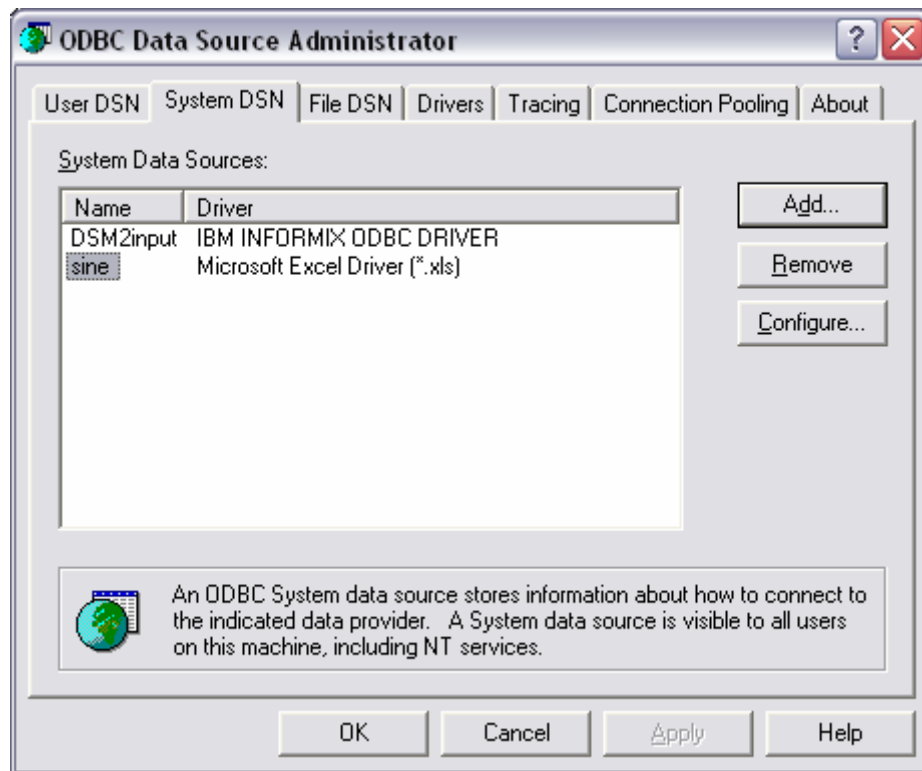

- 8) Click the *Apply & Test Connection* button.
- 9) If connection was successful, click *OK*.
- 10) Click *OK* to accept the degradation message.

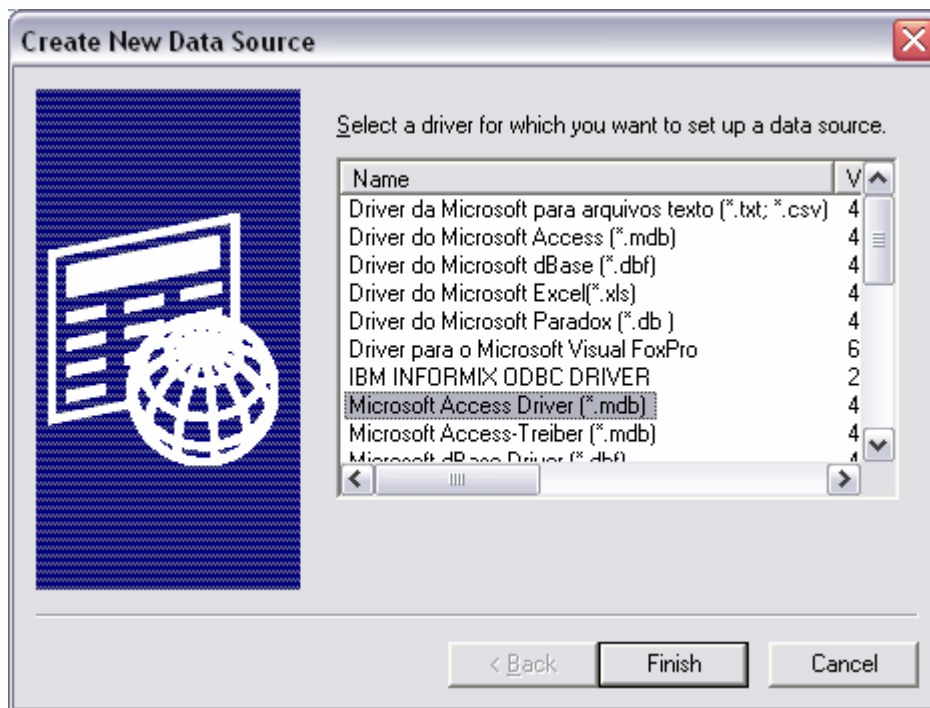

3. Establish an ODBC Data Source for the *Microsoft Access Database*.

a. In *Windows*:

- 1) Navigate to the *Control Panel*.
- 2) Double-click on *Administrative Tools*.
- 3) Double-click on *Data Sources (ODBC)*.
- 4) Select the *System DSN* tab.
- 5) Click the *Add Button*.

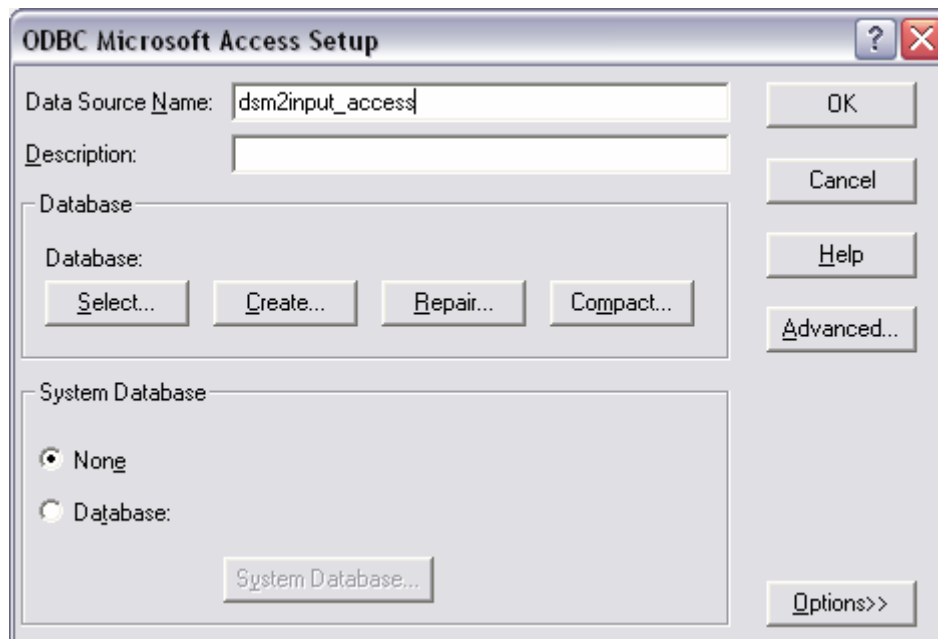

6) Select the *Microsoft Access Driver (*.mdb)* and click *Finish*.

7) In the *ODBC Microsoft Access Setup* Window:

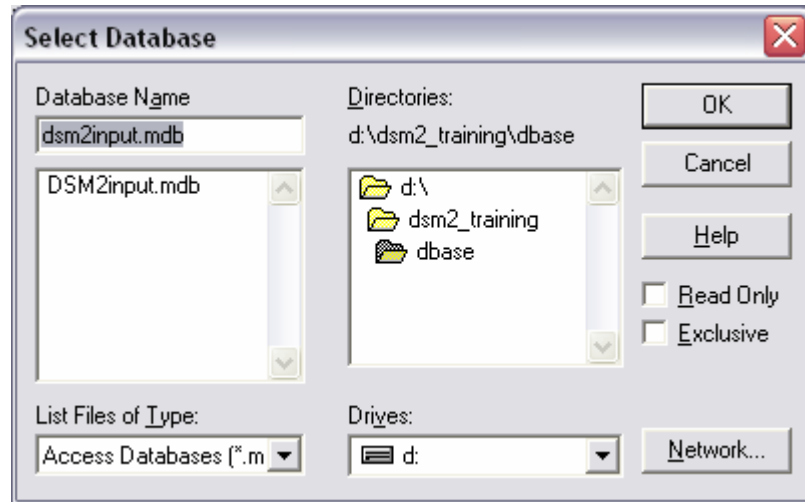

i) For the *Data Source Name*, type *dsm2input_access*.

ii) In the *Database* section, click on Select...

iii) In the *Select Database* window:

- (a) Under the *Drives* section, select the drive letter where the tutorial is stored.
- (b) Under the *Directories* section, navigate to *d:\dsm2_training\dbase*.
- (c) Under the *Database Name* section, select *DSM2input.mdb*.

- (d) Click *OK*.

iv) In the *ODBC Microsoft Access Setup* Window, click *OK*.

4. Configure the JDBC Connection:

- a. In the GUI:
 - 1) Click on the *Tools* menu.
 - 2) Select *Configure Database*.
 - 3) For the *JDBC URL*, enter the following (case-sensitive):
`jdbc:informix-sqli://136.200.32.24:1538/dsm2input:informixserver=ius_dminfo_tcp`
 - 4) For the *JDBC driver*, enter (case-sensitive): `com.informix.jdbc.IfxDriver`

- 5) Enter your username and *Informix* password.

Database Configuration

☐ ODBC source (named in system files)

☒ JDBC source

ODBC DSN
dsm2input_access

JDBC URL
jdbc:informix-sqli://136.200.32.24:1538/dsm2input:informixserver=ius_dminfo_tcp

JDBC driver
com.informix.jdbc.IfxDriver

Database User Name jgalef Password *****

OK Cancel Help

5. Select either *Informix* or *Access* for your DSM2 Database:

- a. In the GUI:

- 1) Click on the *Tools* menu.
- 2) Select *Configure Database*.
- 3) Here is where you select which database to use.
 - i) For *Informix*:
 - (a) Select *JDBC Source*.

Database Configuration

☐ ODBC source (named in system files)

☒ JDBC source

ODBC DSN
dsm2input_access

JDBC URL
jdbc:informix-sqli://136.200.32.24:1538/dsm2input:informixserver=ius_dminfo_tcp

JDBC driver
com.informix.jdbc.IfxDriver

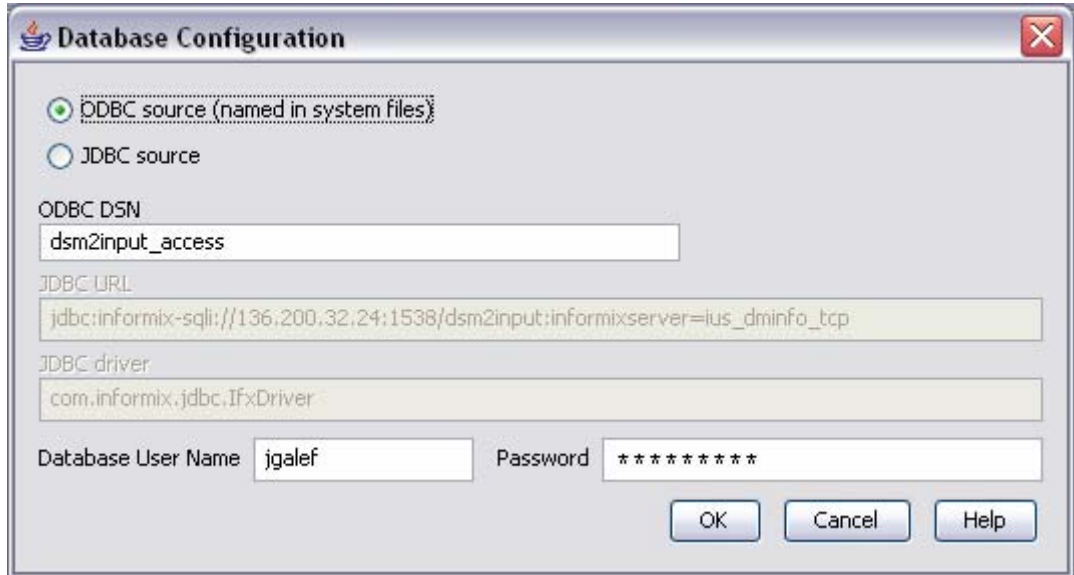

Database User Name jgalef Password *****

OK Cancel Help

(b) Make certain the proper information is given in the *JDBC URL* and *JDBC driver* input boxes. (See previous section if necessary)

ii) For *Microsoft Access*:

(a) Select *ODBC source (named in system files)*.

(b) Fill-in the name of the *ODBC DSN* in that box. This will match the name given in the *Data Sources (ODBC)* window of the *Administrative Tools* of the *Control Panel*.

6. Install the Necessary Fortran Drivers:

a. In Windows Explorer:

- 1) Navigate to the directory, *\dsm2_training\install*.
- 2) Double-click on *VFRUN66BI.exe*.
- 3) If you receive an overwrite message on a *.hlp* file, click *yes*.

7. Install the *Open Command Prompt Here* program:

a. In Windows Explorer:

- 1) Navigate to the directory, *\dsm2_training\install*.
- 2) Double-click on the *CommandPromptHere* directory.
- 3) Right-click on *CMDHERE.INF*, and select *Install* from the menu.

8. Check Your Version of Java:

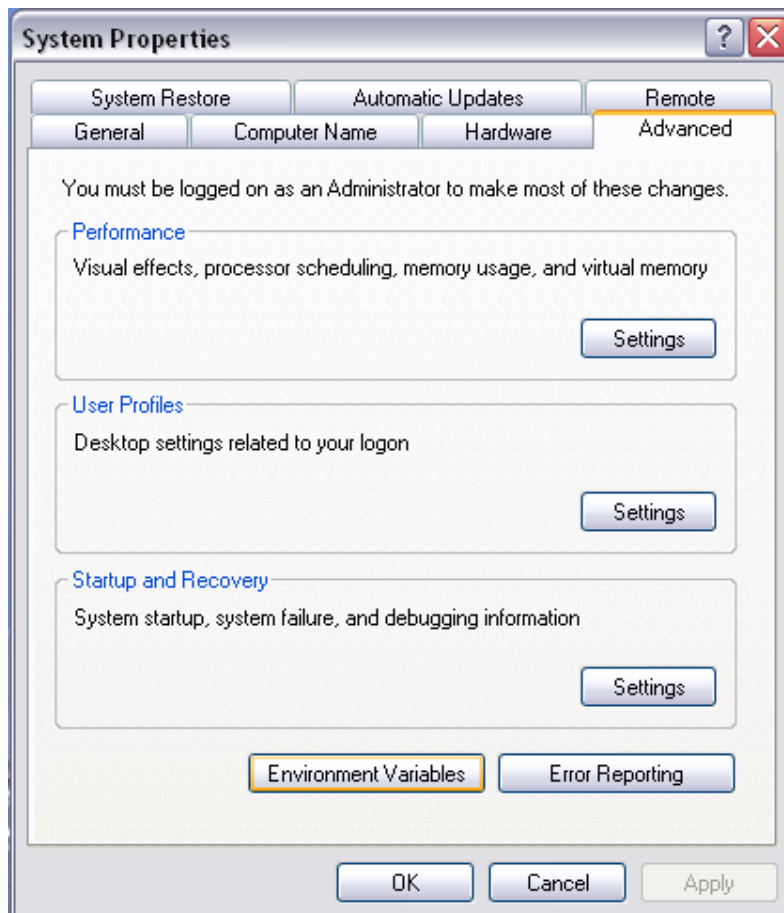

a. In Windows:

- 1) Navigate to the *Control Panel*.
- 2) Double-click on *Java*.
- 3) In the *Java Control Panel*:
 - i) Click the *About...* button.
 - ii) Check to see if the version is 1.4 or higher.
 - iii) Close the *About Java* window.
 - iv) If the version is lower than 1.4, select the *Update* tab.
 - v) Click the *Update Now* button.

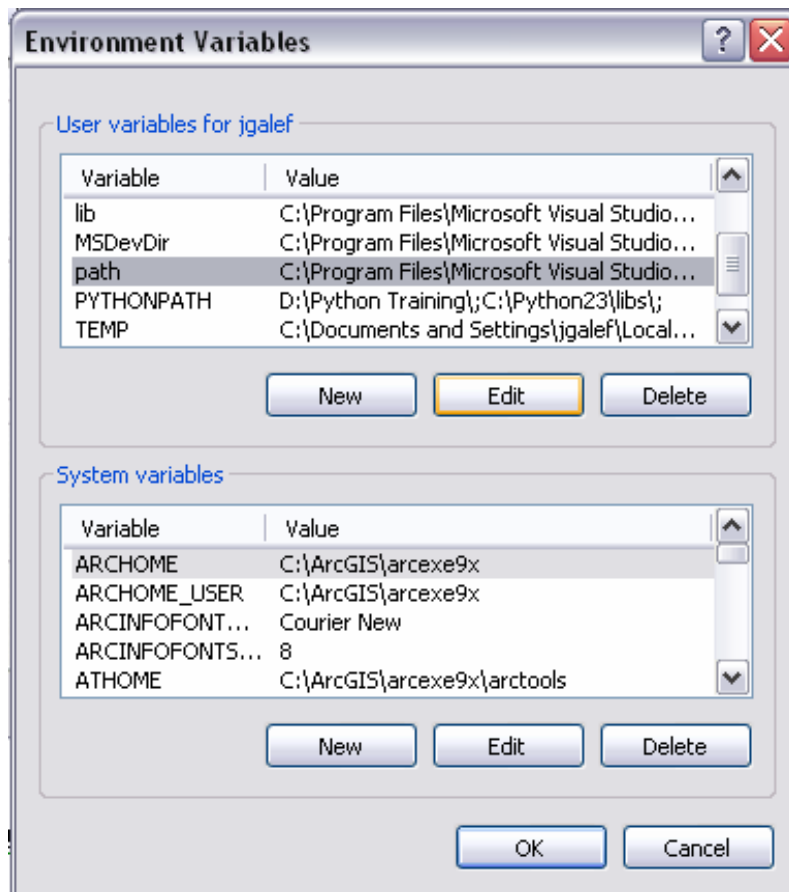

9. Add the Executables to the Path Variable:

a. In Windows:

- 1) Navigate to the *Control Panel*.
- 2) Double-click on *System*.
- 3) Under *System Properties*:
 - i) Select the *Advanced* tab.
 - ii) Click on the *Environment Variables* button.

- iii) In the *User Variable for <user>* window, scroll down to *path* and click the *Edit* button. If *path* does not appear, you may create it with the *New* button.

iv) Scroll to the end of the list and add:

c:\dsm2training\bin;c:\dsm2_training\ptm\bin;c:\dsm2_training\vista\bin

Substitute drive letter or root location for C: as necessary. If you have a working vista installation you can skip the vista part and delete the vista directory from dsm2_training.
